Intensive care unit

PRESSURE REDUCTION AREA SCHEME

An important phase of any surgery is the accommodation of the patient on the operating table. In fact correct positioning reduces the risk of ulcer formation, pressure sores and nerve injuries during the operation.

Furthermore, the patient who goes through local or total anesthesia gradually loses consciousness, motor skills or at least sensitivity to touch and pain. He is therefore unable to perceive and react to potentially harmful external stimuli related to the position in which he is placed on the operating table or caused involuntarily and unknowingly by the health and social care staff: friction, rubbing, excessive and prolonged pressure, shocks, burns.

Therefore it is advisable to choose appropriate positioning devices that ensure correct pressure distribution and maintain the patient in the proper position throughout the intervention.

Reliable, efficient and not much expensive, the positioners are specially designed tools to prevent the onset of injuries and to relieve and stabilize any injuries already present in the patient undergoing surgery.

The half-cylinder positioner can be used to position and support various parts of the body (neck, lower limbs, torso, etc.) in different positions and types of operation.

The colour of the foam used is subject to availability.

Benefits

- Effectiveness to prevent abrasions;
- Effectiveness in preventing friction burns;
- Effectiveness to prevent decubitus wounds;
- Ensures air circulation;
- Ergonomic design.

Features

- Polyurethan foam;
- 100% latex free;
- Non-sterile;
- Single-use.

Dimensions

ID Product	Dimensions
GB.0007PUM01	Diam. 19 x L. 48 cm
GB.0007PUM02	Diam. 18 x L. 76 cm

Technical sheet

GMDN Code	41058
Basic UDI-DI	805771740POSPU
Intended use	Upholstered cushion
Manufacturer	GARDHEN BILANCE SRL
Class	Class I
