Frequent use

SOLID CEASY TO HANDLE O

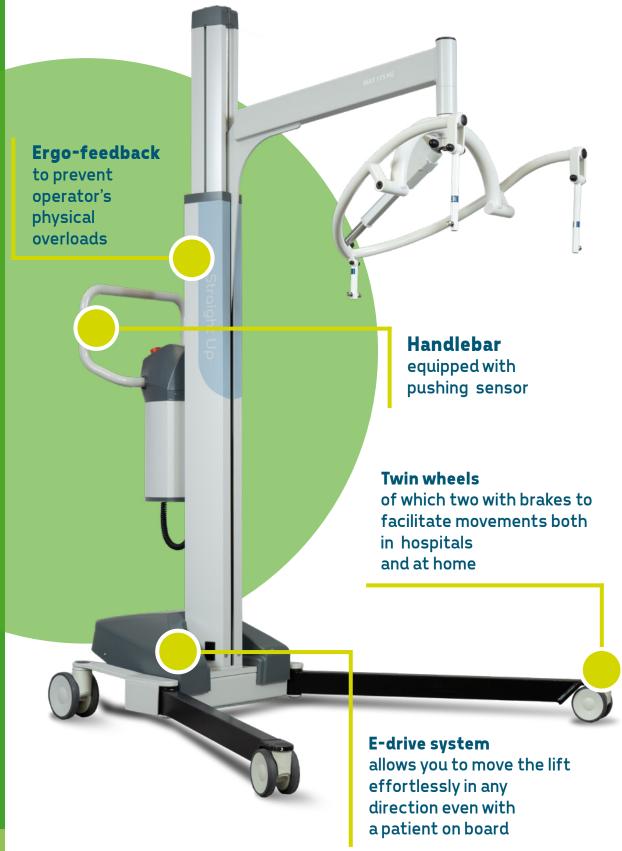

for lifting people who are not able to support their own weight

Standard equipment

The electric lifter **Straight Up - PASSIVE** it is suitable for lifting people who **are unable to support their own weight** and to ensure safety in **movement from a device to another** (bed, wheelchair, stretcher...) avoiding any effort.

Standard equipment

125 mm front wheels with brake

Handset
7-key handset for operating the motors

Charger

Rechargeable battery

Emergency button
Emergency button to lock movements

Manual adjustment
Manual emergency lever
for lifting adjustment

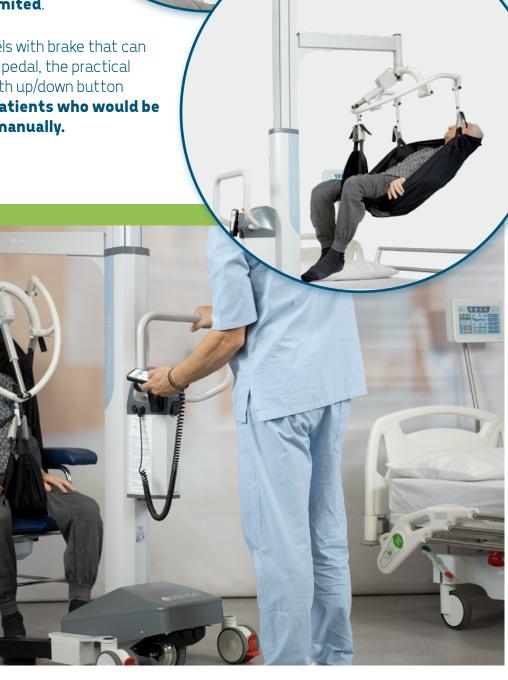

The electric lifter Straight Up - PASSIVE

is designed to allow the operator to independently manage the daily activities of **transfer** and repositioning the patients from a rooms to another.

Thanks to the principle of vertical lifting and the width adjustment of the legs of the base, it is ideal for use in domestic and residential environments and in the rooms where the **space** under the bed is limited.

The set of twin wheels with brake that can be activated by foot pedal, the practical activation control with up/down button allow you to move patients who would be difficult to move manually.

Ergo-feedback

The electric lifter **Straight Up - PASSIVE** is equipped with an Ergo-feedback system. This safety system helps operators to prevent physical overloads as it advices in real time if the lift is moving with too much force **(Orange LEDs that flash)**

Flashing warning thrust force control

Activation and Orientation Automatic

E-drive

The electric lifter Straight Up - PASSIVE PASSIVO is equipped with an E-drive system which allows you to move the lift effortlessly in any direction even with the patient on board.

The handlebar is equipped with a sensor which detects the thrust and communicates the direction to the 5 th wheel.

The presence of the E-drive system in the lift facilitates the work of the operators, avoiding efforts that in the long run could cause body pain.

The activation of the E-drive system occurs by automatically orienting the wheel.

Easily maneuverable by applying a light push

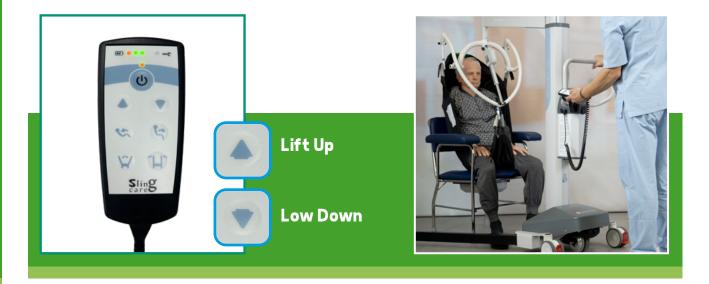

Movements - Lifting

The **lifting and lowering** of the patient is controlled through to dedicated keys on the handset.

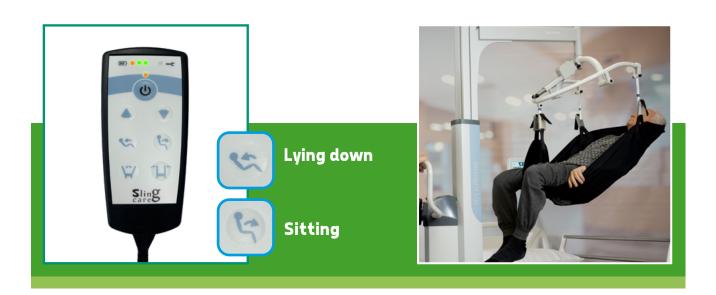

Movements - Inclination of the slingbar for the harness

The lifter is equipped with sling bar and a electric 4 point spreaderbar. The inclination of the sling bar is controlled trough the dedicated buttons on the handset, allowing to adjust the patient from lying to sitting.

Movements - Legs of the device

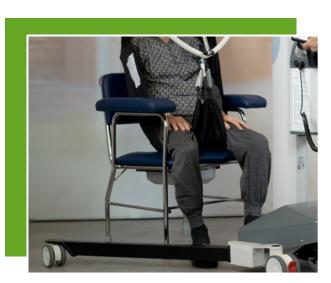

The lifter has a mechanism that allows you to adjust the width of the legs of the base of the device to bring it closer to the patient if sitting on a chair, armchair or lying on a bed. The width of the legs can be full **closed** for moving or positioning under the bed. Movement is controlled trough the dedicated keys on the **handset**.

closed legs for movement or for positioning under the bed

opening of the legs to get closer to the patient when seated

Closure

Standard equipment

- Steel frame painted with thermosetting powders.
- Operator handlebar with pushing sensor

- Ergo-feedback
- Manual emergency lever for lifting adjustment
- Rechargeable battery
- Software
- Output connector for data analysis
- · Capacity 175 kg.

Data sheet

Product code	GBSL0001 - Straight Up Esense GBSL0002 - Straight Up	
Intended use	Used to lift patients who are unable to support their own weight	

Power cable type

Type L - 16A

Accessories Slings

Lifting slings are used in numerous care activities including lifting, positioning and transferring patients from beds, chairs, etc.

Available in different sizes.

SEAMLESS Sling

Model that **guarantees support for the whole body**. It features a comfortable headsupport to prevent inappropriate cervical movements. The sling has no seams and prevents pressure ulcers. In order to position this sling, the patient must either be lying in bed

STEEL STEEL

STANDARD Sling

Model available in 2 fabrics, **black polyester** and **black net polyester** for use in swimming pools and bathrooms.

The sling can be used when the patient is sitting in the chair but not in the sling.

The sling is positioned up to the patient's sacrum and not under the buttocks. When the patient is in the chair, the sling can be removed

The sling attachment system consists of **fixing clips** which signal the locking or unlocking of the sling to the lifter.

Harness attachment clip

If the red color appears on the clip the locking has not been carried out, if instead it is of green color the clip is perfectly fixed to the lifter. The universal clip is also suitable for other lifts on the market according to the ISO-10535 standard.

With the safety lock mechanism
