Mobilization Early and Progressive verticalization

gardhen bilance

www.gardhenbilance.it

HEADREST
Height adjustable
Suitable for patients of every size.

BACKREST
Ergonomic with a padding with different densities ensuring high comfort.

SEAT
Adjustable in height with **lift function**.

ARMREST
Ergonomics, multiple adjustment, seamless upholstery.

BRAKING PEDALS
Centralized brake with **steering system**.

WHEELS
High stability even during **transfer** while the patient is on the chair.

LEGREST
It goes entirely under the seat. Allows the patient to seat frontally on the device with no obstacles.

The chair for easy
ENTRY & EGRESS

Mobilization Early
and progressive verticalization

The UP chair allows early mobilization of the patient through progressive verticalization by starting the patient to discharge in a faster time.

Easy entry

Thanks to an advanced geometric solution, the "leg" section disappears under the seat.
This allows the patient to sit on the chair with the lower limbs perfectly perpendicular to the seat itself. Comfort and postural benefits will derive from this position.

Therefore, all patients, even those with motor difficulties, can easily sit down and get up from the chair, even from the front, always with a correct posture.
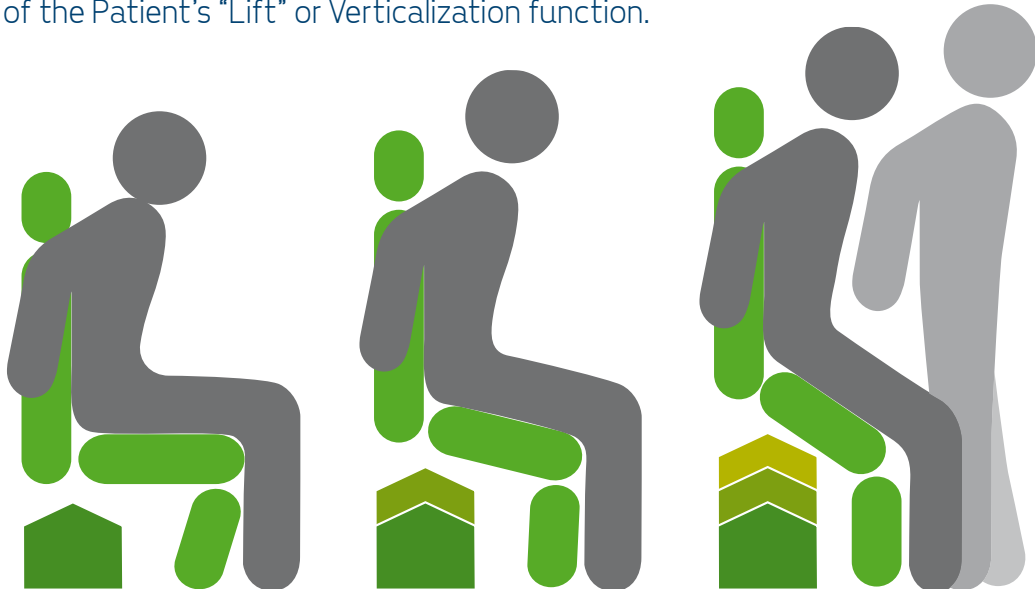

The image describes the leg section that disappears under the seat, the patient can then sit down with a correct postural approach.

Easy egress

UP chair facilitates the patient's exit with a correct postural approach. Backrest, seat and leg sections move simultaneaously and automatically, raising the patients a semi-erect position according to their height.
The device is equipped with three memory functions indeed, each of these positions facilitates the exit of patients according to the size. The following images represent an example of the Patient's "Lift" or Verticalization function.

LIFT

Standard features.

- Steel frame painted with thermosetting powders, anti-tilt that ensures stability in all operating conditions. Wide range of colours as per colours chart.
- Lying surface divided into 4 sections:
  - Headrest (manually adjustable in height) - Equipment code AC33.
  - Backrest section adjustable through dedicated buttons - Equipment code AC12.
  - Leg section adjustable through dedicated buttons - Equipment code AC12.
  - Back and leg sections can be moved simultaneously through dedicated memory buttons.
- The height of the device can be adjusted electrically from 55 to 95cm through a telescopic column with rectangular section. Equipment code AC28/200-400.
- Trendelenburg and reverse Trendelenburg .
- Armests movement synchronized with the backrest. The armrest can be removed, rotated, tilted up/down, overturned up to 90°. They are ergonomic, padded and seamless ensuring high comfort. - Equipment code AC30/C1.
- Handles for transport from a place to another. Thanks to its shape the operator can move the chair very easily even when the patient is seated - Equipment code AC56/C1.
- No.4 swivelling and stainless wheels, diam.100, length 30mm non-marking.
- Centralized braking system (simultaneous lock of each wheel) with steering system. It can be activated through bilateral levers - Equipment code AC7P2G.
- Emergency button for the inhibition of every electric movement - Equipment code AC74/3.
- ABS Cover for base - Equipment code AC83/C.
- ABS Cover for seat - Equipment code AC84/C.
- ABS Cover for back - Equipment code AC86/C.
- Three separate cushions (made of soft foam) back, seat and legs, functional for: excellent posture, ergonomics and preventive effect of pressure ulcers.
- Class 1IM leatherette upholstery, can be sanitized with commonly used detergents. With antibacterial, antifungal, anti-stain properties. Colors as per colour chart - Equipment code AC87/1.
- Handset / control panel with 3,5m coiled cable for the electric movements of the chair. A dedicated key for the inhibition of the movements will be provided - Equipment code AC34P.
- Bilateral handset / control panel support - Equipment code AC25P.
- Supplementary head cushion adjustable in height. Made out of expanded foam and antibacterial upholstery - Equipment code AC27/8.

Chairs

Armrests

Thanks to the manual mechanism it is possible to easily adjust the position of the armrests according to the operator's needs. The available movements are listed below(the images are for illustrative purposes).

SYNCHRONIZED WITH THE BACKREST

TILTABLE

Braking system

The **UP chair** is equipped with a centralized braking system (simultaneous locking of all wheels). With the brake applied, the chair will be completely stable on any type of floor.
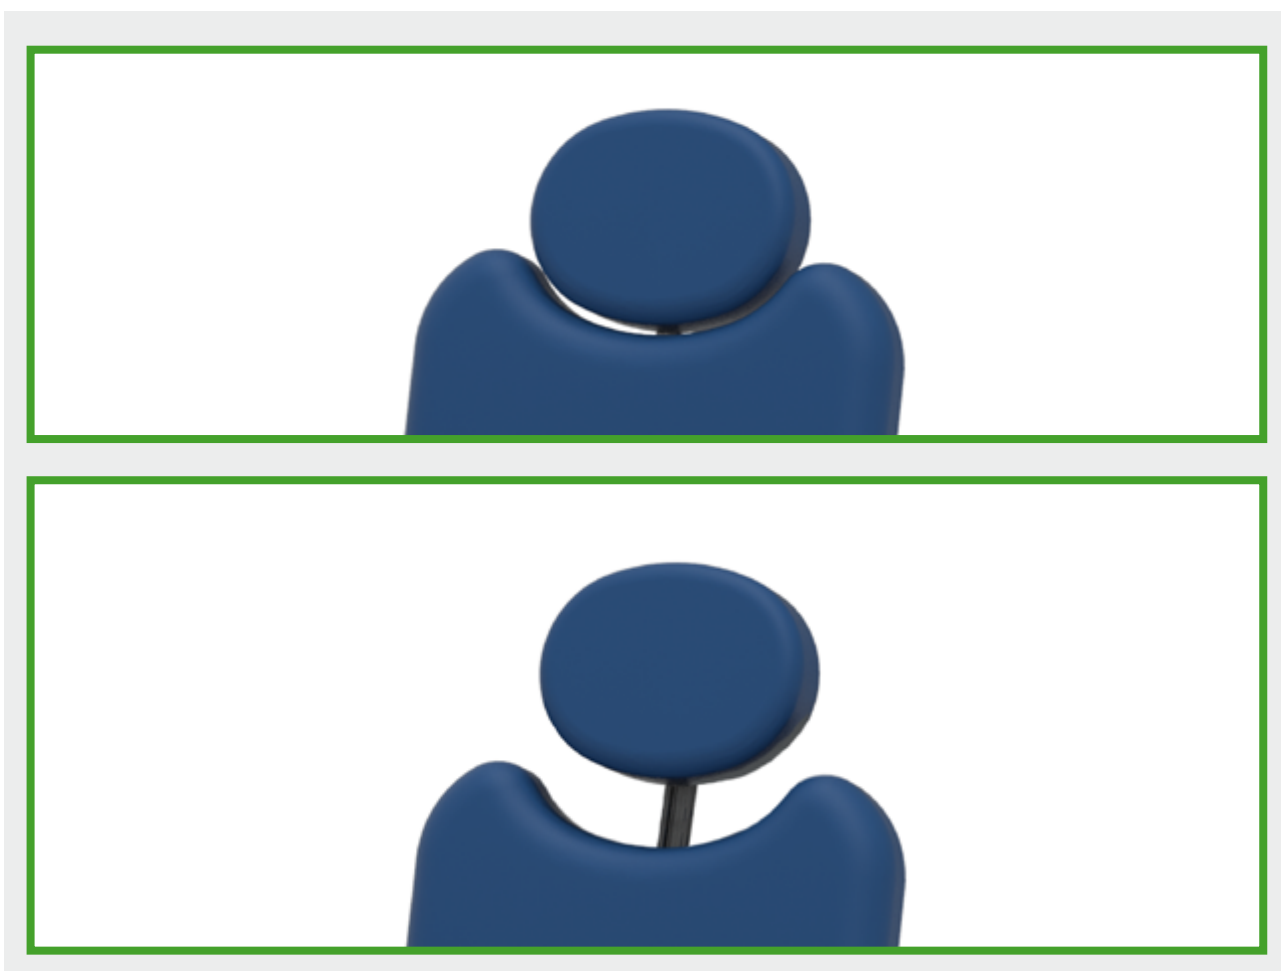

In addition, the device is equipped with a directional system to simplify driving while moving, even while the patient is seated - Equipment code AC7P2G.

An electronic safety device inhibits movements when the wheels are not spinning.

FREE WHEELS	DIRECTIONAL SYSTEM ACTIVATED	BRAKE ACTIVATED

Headrest

The **UP chair** is equipped with a height adjustable headrest that can be adjusted manually - Equipment code AC33.

Movements handles

The medical device is equipped with handles that allow it to be moved from a place to another. Thanks to their ergonomic shape, the operator can move the chair very easily even while the aptient is seated - Equipment code AC56/C1.

Emergency button

The emergency button is an additional safety feature, this medical device is equipped with such button in order to stop all movements - Equipment code AC74/3.

Head cushion

The medical device is equipped with an additional height-adjustable headrest cushion.
Made with foam and antibacterial upholstery - Equipment code AC27/8.

ABS Covers

Backrest, seat and base are protected by ergonomic covers in thermosetting ABS.
They are inteded to be an ergonomic protection of the frame.
